

The Dental Practice Online Presence Checklist

Basic — do these first

Your website

- ☐ **A separate page for each major service** — implants, cosmetic, emergency, kids, etc. Not one long “Services” page with everything tucked inside.
- ☐ **Homepage, About, and an obvious way to book** — a Book Appointment page, contact page, or button on every page.
- ☐ **A services page that links to each service** — so patients and Google can find every treatment you offer.
- ☐ **Pages for nearby towns you actually serve** — only if you truly draw patients from those areas.
- ☐ **Simple web addresses** — like `yoursite.com/services/dental-implants/`, not `yoursite.com/page?id=47`.
- ☐ **Links from your homepage to your main service pages** — not only a booking button.
- ☐ **Footer on every page** with your name, address, phone, hours, and links to important pages.

Works on phones and loads quickly

- ☐ **Padlock in the browser** on every page (secure / HTTPS).
- ☐ **Looks good on a phone** — open your site on your own phone; text readable, buttons tappable, no pinching to zoom.
- ☐ **Loads fast on mobile** — use Google’s free tool PageSpeed Insights: enter your website, run the test, switch to **Mobile**, and check that performance is in the green or “good” range. If the main content takes more than a few seconds to appear, patients may leave before it loads.
- ☐ **One clear main heading per page** — plus subheadings that make sense if someone skims.
- ☐ **A unique page title and short description** on each page you want on Google (what appears in search results).
- ☐ **Descriptions on photos** — not filenames like `image1.jpg`.

- ☐ **No broken links** — click through after launch and after big updates.

Easy to call or book

- ☐ **Phone number on every page** — tap-to-call on mobile.
- ☐ **A clear “Book” or “Schedule” button** visible without scrolling on key pages.
- ☐ **Online scheduling works** — click through from your site like a patient would (Dentrix, NexHealth, Zocdoc, etc.).
- ☐ **Hours and address easy to find** — and hours are still correct.

Real photos

- ☐ **Your logo** on the site.
- ☐ **Real photos of your doctor and team** — not generic stock smiles.
- ☐ **Swap obvious stock photos** for your office, team, or before/after shots (with permission).

Google Business Profile (your Google Maps listing)

- ☐ **Profile claimed and verified** — search your practice on Google Maps; “Claim this business” means it’s not yours yet.
- ☐ **Right business categories** — e.g. Dentist, plus others that fit.
- ☐ **Profile filled out** — hours, services, description, website, attributes.
- ☐ **Real photos** — exterior, waiting room, ops, team.
- ☐ **Website link points to your real domain** — not an old or duplicate site.
- ☐ **Review link saved** — from Google → “Ask for reviews”; use at the front desk, in texts, and email signatures.

You own your accounts

- ☐ **Domain name** registered to you or your practice.
 - ☐ **Hosting account** in your name.
 - ☐ **Google Business Profile** — you’re an owner, not just a manager invited by an agency.
 - ☐ **Google Analytics** — you can log in and see your data.
-

- ☐ **Google Search Console** verified for your website (Google's tool to see how your site appears in search).
-

- ☐ **A copy of your website** — backup or files your vendor must give you if you leave.
-

Your name, address, and phone match everywhere

- ☐ The **exact same practice name, address, and phone** on your website, Google profile, and directories — down to spelling and suite numbers.
-

- ☐ **Apple Maps** — mapsconnect.apple.com
-

- ☐ **Bing Places** — bingplaces.com
-

- ☐ **Yelp** — biz.yelp.com
-

- ☐ **Healthgrades, Zocdoc, Vitals, WebMD** — claim the ones your patients use.
-

Google can find your pages

- ☐ **Sitemap file exists** — visit yoursite.com/sitemap.xml or ask your web person; it should list your public pages.
-

- ☐ **Sitemap submitted in Google Search Console** — under Sitemaps.
-

- ☐ **Thank-you and staging pages hidden from Google** — so only real pages show in search.
-

Before you call the site "done"

- ☐ **Service pages have real content** — enough that a patient learns something; mention your city in the headline when it's true.
-

- ☐ **Doctor bio on About** — who you are, training, why patients choose you.
-

- ☐ **FAQ with real questions** — cost, pain, recovery, insurance.
-

- ☐ **A few real reviews on the site** — with permission.
-

- ☐ **Insurance or financing page** — if applicable.
-

- ☐ **Click every page on phone and desktop** — test phone, booking, and forms.
-

Advanced — once the basics are in place

Content that helps you rank

- ☐ **Specific, factual writing** — what you do, where you are, who the doctors are.
- ☐ **FAQ written like patients talk** — e.g. “How much do implants cost in [your city]?”
- ☐ **Same practice info everywhere** — website, Google profile, and directories all agree.
- ☐ **Gallery or before/after** — only real images with patient consent.

Reviews

- ☐ **At least 20 Google reviews** (50+ is better); **4.5 stars or higher** if you can.
- ☐ **A system to ask for reviews** — front desk, text, or email.
- ☐ **QR code in the office** that goes to your Google review link.
- ☐ **Reply to every Google review** — good and bad.

Deeper website and tracking

- ☐ **Structured data set up** — code that helps Google understand your address, hours, and services (test here if your web person handles this).
- ☐ **Google Analytics tracking phone calls and bookings.**
- ☐ **Homepage links to your main services** — not only “Book now.”
- ☐ **Related services linked together** — e.g. implants page links to bone grafting.
- ☐ **Blog posts link to service pages** when relevant.
- ☐ **Monthly check of Google Search Console** — what people search for and any errors.

Keep it up

- ☐ **Post on Google Business Profile** — offers, photos, news.
- ☐ **Keep collecting reviews.**
- ☐ **Publish or update content** when you add services or want to rank for new topics.
- ☐ **Update the site** when hours, doctors, insurance, or services change.

Replacing an old website

- ☐ **Old web addresses redirect to new ones** — your web person sets up redirects so nothing breaks.
 - ☐ **Save a copy of the old site** before canceling a vendor.
 - ☐ **Update your Google profile's website link** after go-live.
 - ☐ **Re-verify Google Search Console** if your domain changed.
-
